Site

The SUTD Hostel pond covers an area of about 4866 m² which is a significant portion of the school. However, nobody goes there at night. It is eerie - users are not able to appreciate the beauty of the space.

This site holds **enormous potential** as it is a big open **tranquil place**. The fishes also attract students and families. It is a pity that no one goes there at night.

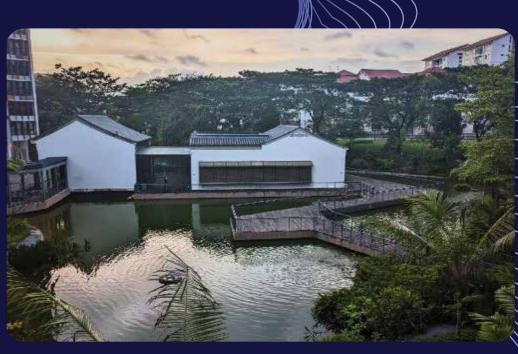

Although the site can be eerie after dark, the area is **peaceful and serene**.

Project Serenity Opportunity Statement

While the site beautiful and tranquil, how might we attract people to the SUTD pond at night?

Design Goals

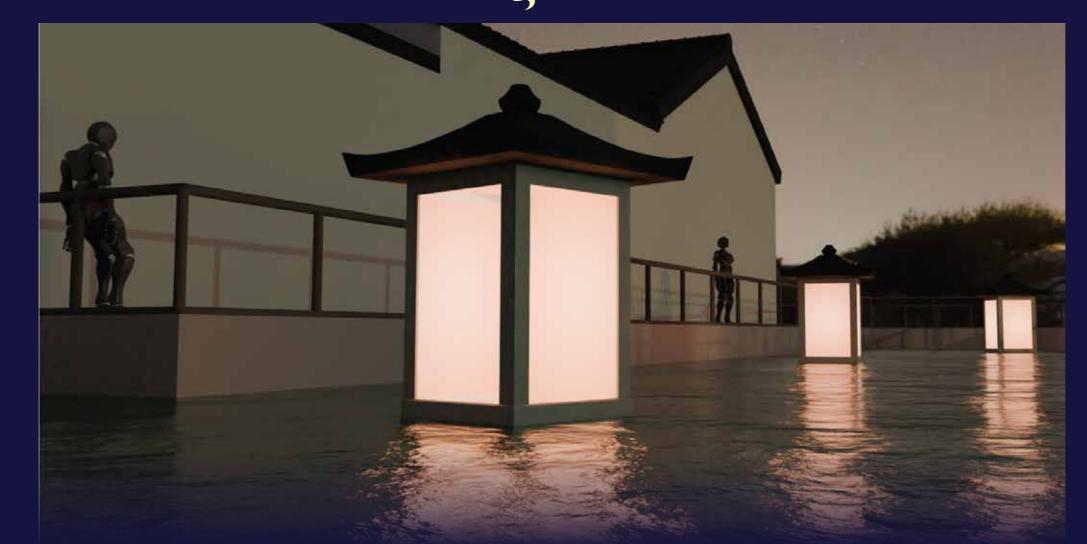

The design serves to provide a more **interactive** way to view fishes that does not intrude into the environment and is aesthetically **elegant** to invite people to come into the space.

SUTD Pond

Introducing: The Lantern

Disappear into the experience

Functional Process

1. Air is removed from within the lantern and is displaced by water, filling the lantern

2. Fishes in the pond gradually explore the new space within the lantern

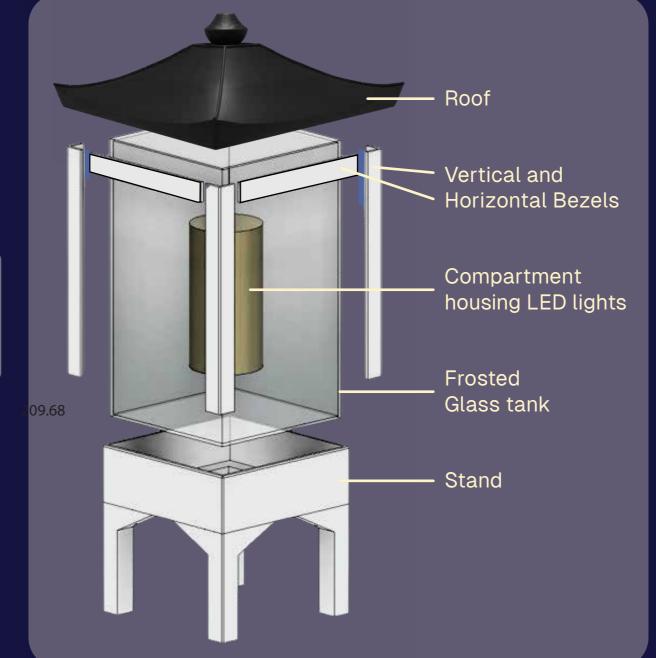

3. As a user walk in the proximity of a lantern, the ultrasound sensor detects their approach

6. As the user moves on along the boardwalk, the lantern dims and the subsequent lantern brightens

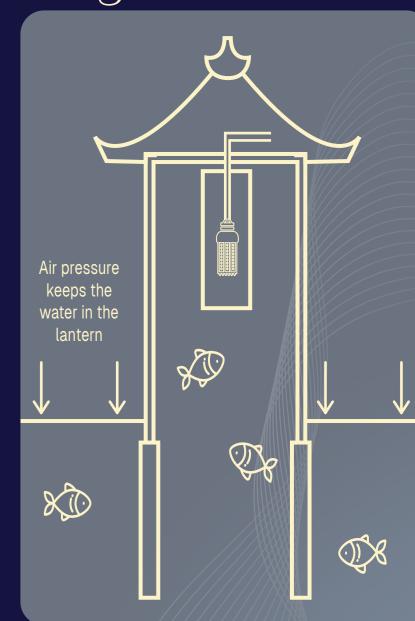

> 5. When fishes swim around in the lantern, their shadows are cast onto the lantern's faces

4. The light within the lantern turns on with increasing brightness as the user gets closer

User Journey Map

Massing Iterations

Prior iteration: Roof

In an attempt to allow light from the tank to diffuse through the roof, a fence-like roof was

designed

shadows and details of the fish was done via overlaying frosted acrylic strips over clear glass

An attempt to combine

Prior iteration: Legs

With the aim of letting fish swim through the legs of the stand, a negative void was created into the legs of the stand

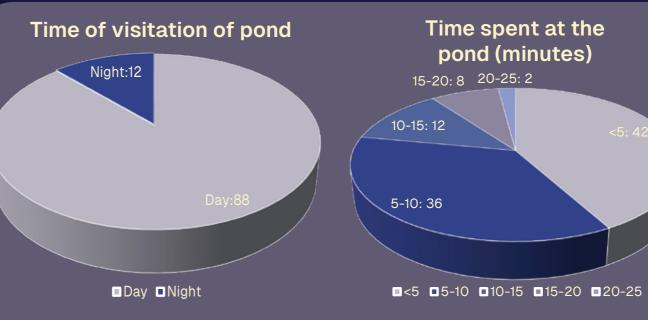

Prior iteration: Lights

Prior iteration: Tank

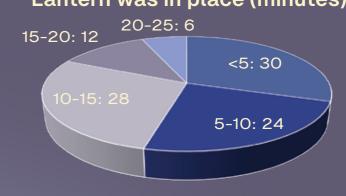

Previously, a spotlight was placed on the exterior face of the lantern to shine through it

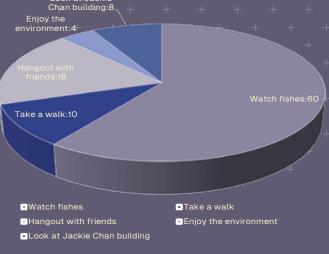

User Testing

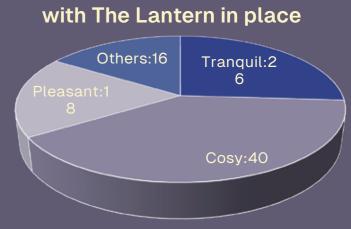

Duration of time spent at the The Lantern makes the pond more aesthetically pleasing pond at night with if The Lantern was in place (minutes)

Reason for visiting the pond

Word to describe the pond

■Tranquil ■Cosy ■Pleasant ■Others
